Differential Pressure Transmitter DPS 300

CE

BD SENSORS[®] 1 General information

⚠ Do not blow into the pressure ports! This causes damage to the device.

- This operating manual contains important information on the proper usage of the device. Read this operating manual carefully before installing and starting up the pressure measuring device.
- Adhere to the safety notes and operating instructions which are given in the operating manual. Additionally applicable regulations regarding occupational safety. accident prevention as well as national installation standards and engineering rules must be complied
- This operating manual is part of the device. It must be kept near its location and always be accessible to all employees.
- This operating manual is copyrighted. The contents of this operating manual reflect the version available at the time of printing
- MARNING! To avoid operator hazards and damage to the device, the following instructions may only be carried out by qualified technical personnel
- Imitation of liability: In case of non-observance of the operating manual, inappropriate use, modifications or damage, no liability is assumed and warranty claims will be excluded.
- KS : Note
 - Technical modifications reserved -

2 Product identification

2.1 Intended use

- The DPS 300 differential pressure transmitter has been developed for the measurement of pressure difference of dry, non-aggressive gases and pressurized air and can be used for a wide range of different HVAC applications. Its robust design means it can be used in the laboratory and under industrial conditions. Preferred areas of use are in heating, ventilation and air conditioning systems; clean room and medical technology, filter technology and draft metering checks
- It is the operator's responsibility to check and verify the suitability of the device for the intended application. If any doubts remain, please contact our sales department in order to ensure proper use. BD SEN-SORS is not liable for any incorrect selections and their effects!
- The technical data listed in the current data sheet are engaging and must be complied with. If the data sheet is not available, please order or download it from our homepage (http://www.bdsensors.de).
- MARNING! Danger by inappropriate use!

Portugal

The addresses of our distribution partners are listed on our homepage www.bdsensors.com. It is also possible to download datasheets, operating manuals, ordering codes and certificates

The device can be identified by its manufacturing label. It provides the most important data. The product can be

2.2 Identification

clearly identified by the ordering code. Nominal Type designation Ordering code Serial number range

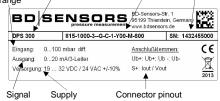

Fig. 1: Manufacturing label- example

The manufacturing label may not be removed from the device!

2.3 Package contents

Please verify that all listed parts are included in the delivery undamaged and comply with your order

> 1 Differential Pressure Transmitter DPS 300 1 Operating manual

2.4 Transport and storage

Permissible temperature for storage: -10 °C to + 70 °C For transport make sure that both pressure inputs of differential pressure sensors are open. The air transport of absolute pressure sensors should only be done in a pressure compensated cabin.

2.5 Declaration of conformity / CE

The delivered device fulfils all legal requirements. The applicable directives, harmonised standards and documents are listed in the EC declaration of conformity. which is available online (http://www.bdsensors.cz). The operational safety is additionally confirmed by the CE sign on the manufacturing label.

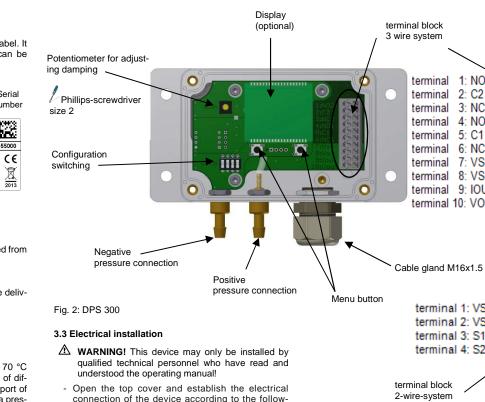

3 Installation

3.1 Mounting and safety instructions

- ▲ WARNING! This device may only be installed by qualified technical personnel who have read and understood the operating manual!
- MARNING! Install the device only when depressurized and current-free!
- Handle this device with care, both in packaged and unpackaged condition!
- No modifications/changes should be made on the device.
- Do not throw the device!
- 1 Do not use any force when installing the device, to prevent damage of the device and the plant!
- Avoid sources of interference (transformers, transmitters, motors etc.) or sources of heat in the surrounding area.
- Shocks or vibrations at the mounting connection can cause distortions to the output signals.

3.2 Installation steps

- Carefully remove the pressure measuring device from its package and dispose of the package properly
- Mount the device in a suitable location using both straps. The corresponding dimensions are provided under "6"
- Connections should be vertical, i. e. the pressure connections should point downwards. The sensors are calibrated in the factory for these mounting conditions. In addition, the formation of condensation in the pressure tubing of the sensor is also reduced
- Use the appropriate hoses for the connection

terminal block 2-wire-system

3.4 Pressure port

- Connect the hose with the higher pressure to the right hand (positive) pressure port
- Next, tighten the cable gland by hand. Make sure, however, that the cable is strain-relieved.

EN **Operating Manual**

Symbols used: ⚠ : Warning Caution

Connect the hose with the lower pressure to the left hand (negative) pressure port

4 Initial start-up

After switching on the power supply, the output signal can be measured. Variations in the output signals may have two possible causes:

- 1. The warm-up time of the sensor is about 30min. After this period, the sensor signal should be stable for zero differential pressure and constant ambient temperature.
- 2. For small pressure ranges, a slight deviation in the zero point due to ambient conditions can occur. This error can be corrected by adjusting the zero-point potentiometer of the sensor after the warm-up time. (Set the output signal of the sensor with both pressure inputs open to the nominal value.)

5 Operation

5.1 General information

- **WARNING!** Before start-up, the user must check to ensure proper installation and for any visible defects.
- MARNING! The device may only be started and operated by authorized personnel who have read and understood the operating manual!
- **WARNING!** The device may only be used within the technical specifications (see the data in the data sheet)!
- **WARNING!** Do not touch the bonding wires this can destroy the device.

5.2 Setting of damping

Potentiometer for setting the damping is located adiacent to the display on the left (see image 2). The damping of the device can be set by turning a size 2 Phillips screwdriver in the area of 0 to 5000ms.

5.3 Menu buttons

Zeroing: push left menu button for at least 1 second

5.4 Configuration switch

3-wire-system:

IING! When dismantling the device, it must be carried out in a depressurized and curcondition! Also check if it is necessary to off the medium before dismantling!

IING! The medium may pose a danger to the herefore comply with adequate precautions

nust be disposed of according to an Directives 2002/96/EG and on waste electrical and elecnent. Waste of electrical and elecnent may not be disposed of with

NG! Depending on the measuring medium, on the device may pose a danger to the user environment. Comply with adequate precaupurification and dispose of it properly.

7 Maintenance

In principle, this device is maintenance-free. If required, the housing of the device can be cleaned when it is switched off using a damp cloth and non-aggressive cleaning solutions.

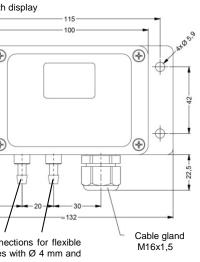

8 Return

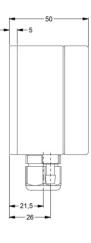

Before every return of your device, whether for recalibration, decalcification, modifications or repair, it has to be cleaned carefully and packed shatter-proofed. You have to enclose a notice of return with detailed defect description when sending the device. If your device came in contact with harmful substances, a declaration of decontamination is additionally required. Appropriate forms can be downloaded from our homepage www.bdsensors.cz. Should you dispatch a device without a declaration of decontamination and if there are any doubts in our service department regarding the used medium, repair will not be started until an acceptable declaration is sent.

\triangle If the device came in contact with hazardous substances, certain precautions have to be complied with for purification!

9 Warranty conditions

The warranty conditions are subject to the legal warranty period of 24 months from the date of delivery. In cases of improper use, modifications of or damage to the device, we do not accept warranty claims. Damaged diaphragms will not be accepted either. Furthermore, defects due to normal wear are not subject to warranty services.
